

Tree & Shrub Program Guide

January	February	March	April	May	June	July	August	September	October	November	December
Dormant & Deep Root Oil Spray Feeding											
<p>Deep root feeding (both summer and winter) includes all of the nutrients your shrubs and trees will need to grow consistently. We use only the best controlled release fertilizers.</p>			Rd-2 Spray								
				Rd-3 Spray							
						Rd-4 Spray					
							Rd-5 Spray				
<p>Red Tips are good plants, but they are prone to a very destructive leaf soot disease. Our 3 step spray program uses the most effective, professional fungicides available. We also include CoRoN controlled release fertilizer as well as Microflow iron and sulfur.</p> <p>It is important to note that we don't spray all red tips. Due to the severe destructive capacity of this disease, it may not be worth the effort to spray in certain situations. Please call us and allow us to help you evaluate your best course of action.</p>											
									<p>Our summer spray program will protect your plants from pesky insects like aphids, lacebugs, whiteflies, spider mites, and Japanese beetles. With each application, we include foliar feeding with CoRoN slow release fertilizer. We also use Microflow foliar iron and sulfur.</p> <p>These applications will give you glossy leaves with good color. Your reds will be redder, your yellows brighter, and your greens deeper. The consistent feeding also helps REDUCE disease pressure by avoiding flush growth.</p>
